Limited Inspection for Asbestos Containing Materials Greenville County Family Court 301 University Ridge Greenville, S.C. 29601

I. Introduction

Environmental Testing and Management Inc., (ETM) was retained by Greenville County to conduct a limited inspection for suspect asbestos containing materials in the Greenville County Family Courthouse, located at 301 University Ridge, Greenville, S.C. This inspection focused on identifying and, where possible, sampling suspect asbestos containing materials in the pre-1981 portion of this building. In addition, a carpet replacement project is planned for the addition portion of the Family Court building (the addition was added to the original building post 1981). Therefore, three samples of carpet mastic were to be collected in the addition. This inspection was conducted by Andrew Schauder, CIH, and Roxane Schauder, MS, of ETM on August 30, 2012. Fortynine (49) bulk materials were collected and (71) layers were analyzed for the presence of asbestos.

II. Observations

The inspection began in the original portion of the building, in the hallway behind the courtrooms. Three samples (1-3) were collected of the predominant ceiling tile present in this area (see photo #3). These samples returned as negative for the presence of asbestos. Three samples (4-6) were also collected of sheetrock and joint compound (see photos #1 and 2). These samples returned as negative as well.

Much of the floor area behind the courtrooms is covered with carpet squares. However, there are several areas of floor tile. In a small coffee room, three samples (7-9) were collected of the ivory and black mottled floor tile and its associated tan mastic (see photo #4). Three samples (10-12) were also collected of the light grey cove base and its associated mastic. All of these samples returned as negative upon bulk analysis. In accordance with SCDHEC regulations for non-friable organically bound (NOB) materials, as sample of each item was subsequently submitted for TEM analysis. All materials were confirmed to be negative for the presence of asbestos.

Also in the coffee room, three samples (13-15) were collected of the replacement style of ceiling tile (see photo #5). Two additional samples (16-17) were collected of sheetrock and joint compound. All samples returned as negative.

ENVIRONMENTAL TESTING & MANAGEMENT, INC.

Limited Inspection for Asbestos Containing Materials Greenville County Family Courthouse 301 University Ridge Greenville, S.C. 29601 Page Two

Above the ceiling in the coffee room, three samples (18-20) were collected of white HVAC mastic. These samples returned as less than 1% asbestos (meaning the mastic can be treated as a non-asbestos containing material).

In Judge Jenkins' office, three samples (21-23) were collected of carpet mastic. These samples returned as negative as confirmed by TEM analysis.

In the hallway just in front of Courtroom 4, three samples (24-26) were collected of the ceiling tile found in this area (see photo #6). Two additional samples (27-28) were collected of the sheetrock and joint compound. All samples returned as negative.

In the DJJ area, at room 12, three samples (29-31) were collected of the light brown cove base and mastic present here.

In the Guardian Ad Litem room (room 525), three samples (32-34) were collected of the black cove base (the mastic is the same as that associated with samples 29-31). All of these materials returned as negative for the presence of asbestos as confirmed by TEM analysis. It should be noted that carpeting in this area is the original carpet. As there was no good place to pull the carpet to observe the mastic underneath to see if it was the same yellow carpet mastic as sampled elsewhere, this area will remain suspect insofar as the carpet mastic is concerned.

In the large break room (room 1000), three samples (35-37) were collected of the white flecked floor tile present here (see photos # 7 and 8) and its associated tan mastic. This is the top layer of floor tile in this room and it was found to be negative as confirmed by TEM analysis (the tan mastic is the same as that associated with samples 7-9). The bottom layer appears to be the same as the floor tile as is present in the break room as represented by samples 7-9 (also negative). This white flecked floor tile is present in several areas throughout the original portion of the Family Court.

In the mezzanine, three samples (38-40) were collected of the green floor tile and mastic (see photo #9). Three samples (41-43) were also collected of the light grey cove base and mastic. Lastly, three samples (44-46) were collected of the grey mastic on ductwork. All samples returned as negative for the presence of asbestos as confirmed by TEM analysis.

Due to a planned upcoming carpet replacement project, the carpet mastic present in the Addition was sampled. Three samples (1-3) were collected of this material and all samples returned as negative for the presence of asbestos as confirmed by TEM analysis.

ENVIRONMENTAL TESTING & MANAGEMENT, INC.

Limited Inspection for Asbestos Containing Materials Greenville County Family Courthouse 301 University Ridge Greenville, S.C. 29601 Page Three

No other building materials in this post-1981 construction were disturbed at this time per owner request.

III. Conclusions and Recommendations

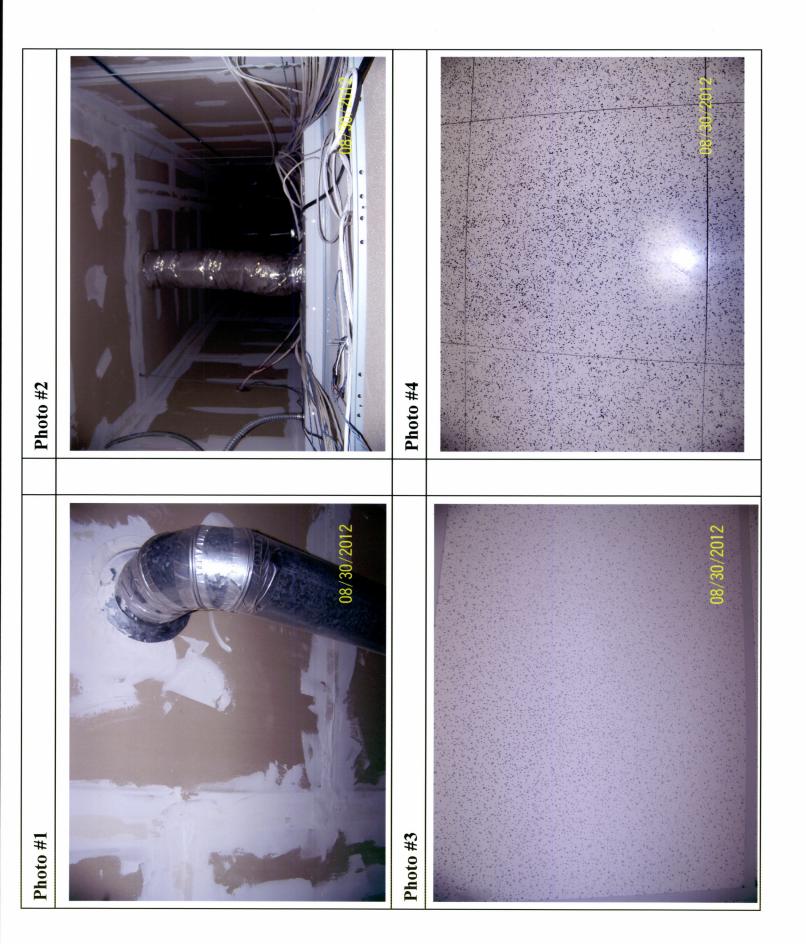

The results of this survey are summarized in Table I (original portion) and Table II (addition). These Tables list the following data:

- 1. Sample number
- 2. Sample location
- 3. Material sampled
- 4. The result of the analysis of the material sampled.

As noted above, there were no asbestos containing materials found in either the original or the addition portions of the Family Courthouse.

LEGEND: Non-Anth = Non-Asbestiform Anthophylite

Non-Trem = Non-Asbestiform Tremolite

Calc Carb = Calcium Carbonate

METHOD: EPA 600 / R93 / 116 and EPA 600 / M4-82 / 020

The detection limit for the method is <1% by visual estimation and 0.25% by 400 point counts or 0.1% by 1,000 point counts.

Due to the limitations of the EPA 600 Method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarizing light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation.
